Computer-Assisted Conceptualization

Gary King

Institute for Quantitative Social Science
Harvard University

Talk at Harvard Graduate School of Arts and Sciences, Alumni Day, 4/2/2011

[1] Based on joint work with Justin Grimmer (Harvard $\rightsquigarrow$ Stanford)

A Method for Computer Assisted Conceptualization

- Conceptualization through Classification: "one of the most central and generic of all our conceptual exercises. . . . the foundation not only for conceptualization, language, and speech, but also for mathematics, statistics, and data analysis. . . . Without classification, there could be no advanced conceptualization, reasoning, language, data analysis or,for that matter, social science research." (Bailey, 1994).

A Method for Computer Assisted Conceptualization

- Conceptualization through Classification: "one of the most central and generic of all our conceptual exercises. . . . the foundation not only for conceptualization, language, and speech, but also for mathematics, statistics, and data analysis. . . . Without classification, there could be no advanced conceptualization, reasoning, language, data analysis or,for that matter, social science research." (Bailey, 1994).
- Cluster Analysis: simultaneously (1) invents categories and (2) assigns documents to categories

A Method for Computer Assisted Conceptualization

- Conceptualization through Classification: "one of the most central and generic of all our conceptual exercises. . . . the foundation not only for conceptualization, language, and speech, but also for mathematics, statistics, and data analysis. . . . Without classification, there could be no advanced conceptualization, reasoning, language, data analysis or,for that matter, social science research." (Bailey, 1994).
- Cluster Analysis: simultaneously (1) invents categories and (2) assigns documents to categories
- We focus on unstructured text; methods apply more broadly.

A Method for Computer Assisted Conceptualization

- Conceptualization through Classification: "one of the most central and generic of all our conceptual exercises. . . . the foundation not only for conceptualization, language, and speech, but also for mathematics, statistics, and data analysis. . . . Without classification, there could be no advanced conceptualization, reasoning, language, data analysis or,for that matter, social science research." (Bailey, 1994).
- Cluster Analysis: simultaneously (1) invents categories and (2) assigns documents to categories
- We focus on unstructured text; methods apply more broadly.
- Main goal: Switch from Fully Automated to Computer Assisted

What's Hard about Clustering?

What's Hard about Clustering?

(aka Why Johnny Can't Classify)

What's Hard about Clustering?

(aka Why Johnny Can't Classify)

- Clustering seems easy; its not!

What's Hard about Clustering?

(aka Why Johnny Can't Classify)

- Clustering seems easy; its not!
- Bell(n) = number of ways of partitioning n objects

What's Hard about Clustering?

(aka Why Johnny Can't Classify)

- Clustering seems easy; its not!
- Bell(n) = number of ways of partitioning n objects
- Bell(2) = 2 (AB, A B)

What's Hard about Clustering?

(aka Why Johnny Can't Classify)

- Clustering seems easy; its not!
- Bell(n) = number of ways of partitioning n objects
- Bell(2) = 2 (AB, A B)
- Bell(3) = 5 (ABC, AB C, A BC, AC B, A B C)

What's Hard about Clustering?

(aka Why Johnny Can't Classify)

- Clustering seems easy; its not!
- Bell(n) = number of ways of partitioning n objects
- Bell(2) = 2 (AB, A B)
- Bell(3) = 5 (ABC, AB C, A BC, AC B, A B C)
- Bell(5) = 52

What's Hard about Clustering?

(aka Why Johnny Can't Classify)

- Clustering seems easy; its not!
- Bell(n) = number of ways of partitioning n objects
- Bell(2) = 2 (AB, A B)
- Bell(3) = 5 (ABC, AB C, A BC, AC B, A B C)
- Bell(5) = 52
- Bell(100) $\approx$

What's Hard about Clustering?

(aka Why Johnny Can't Classify)

- Clustering seems easy; its not!
- Bell(n) = number of ways of partitioning n objects
- Bell(2) = 2 (AB, A B)
- Bell(3) = 5 (ABC, AB C, A BC, AC B, A B C)
- Bell(5) = 52
- Bell(100) $\approx 10^{28} \times$ Number of elementary particles in the universe

What's Hard about Clustering?

(aka Why Johnny Can't Classify)

- Clustering seems easy; its not!
- Bell(n) = number of ways of partitioning n objects
- Bell(2) = 2 (AB, A B)
- Bell(3) = 5 (ABC, AB C, A BC, AC B, A B C)
- Bell(5) = 52
- Bell(100) $\approx 10^{28} \times$ Number of elementary particles in the universe
- Now imagine choosing the *optimal* classification scheme by hand!

What's Hard about Clustering?

(aka Why Johnny Can't Classify)

- Clustering seems easy; its not!
- Bell(n) = number of ways of partitioning n objects
- Bell(2) = 2 (AB, A B)
- Bell(3) = 5 (ABC, AB C, A BC, AC B, A B C)
- Bell(5) = 52
- Bell(100) $\approx 10^{28} \times$ Number of elementary particles in the universe
- Now imagine choosing the *optimal* classification scheme by hand!
- Fully automated algorithms can help, but which ones?

The Problem with Fully Automated Clustering

The Problem with Fully Automated Clustering

- The (Impossible) Goal: optimal, fully automated, application-independent cluster analysis

The Problem with Fully Automated Clustering

- The (Impossible) Goal: optimal, fully automated, application-independent cluster analysis
- No free lunch theorem: every possible clustering method performs equally well on average over all possible substantive applications

The Problem with Fully Automated Clustering

- The (Impossible) Goal: optimal, fully automated, application-independent cluster analysis
- No free lunch theorem: every possible clustering method performs equally well on average over all possible substantive applications
- Existing methods:

The Problem with Fully Automated Clustering

- The (Impossible) Goal: optimal, fully automated, application-independent cluster analysis
- No free lunch theorem: every possible clustering method performs equally well on average over all possible substantive applications
- Existing methods:
  - Many choices: model-based, subspace, spectral, grid-based, graph-based, fuzzy k-modes, affinity propagation, self-organizing maps,...

The Problem with Fully Automated Clustering

- The (Impossible) Goal: optimal, fully automated, application-independent cluster analysis
- No free lunch theorem: every possible clustering method performs equally well on average over all possible substantive applications
- Existing methods:
  - Many choices: model-based, subspace, spectral, grid-based, graph-based, fuzzy k-modes, affinity propagation, self-organizing maps,...
  - Well-defined statistical, data analytic, or machine learning foundations

The Problem with Fully Automated Clustering

- The (Impossible) Goal: optimal, fully automated, application-independent cluster analysis
- No free lunch theorem: every possible clustering method performs equally well on average over all possible substantive applications
- Existing methods:
  - Many choices: model-based, subspace, spectral, grid-based, graph-based, fuzzy k-modes, affinity propagation, self-organizing maps,...
  - Well-defined statistical, data analytic, or machine learning foundations
  - How to add substantive knowledge: With few exceptions, unclear

The Problem with Fully Automated Clustering

- The (Impossible) Goal: optimal, fully automated, application-independent cluster analysis
- No free lunch theorem: every possible clustering method performs equally well on average over all possible substantive applications
- Existing methods:
  - Many choices: model-based, subspace, spectral, grid-based, graph-based, fuzzy k-modes, affinity propagation, self-organizing maps,...
  - Well-defined statistical, data analytic, or machine learning foundations
  - How to add substantive knowledge: With few exceptions, unclear
  - The literature: little guidance on when methods apply

The Problem with Fully Automated Clustering

- The (Impossible) Goal: optimal, fully automated, application-independent cluster analysis
- No free lunch theorem: every possible clustering method performs equally well on average over all possible substantive applications
- Existing methods:
  - Many choices: model-based, subspace, spectral, grid-based, graph-based, fuzzy k-modes, affinity propagation, self-organizing maps,...
  - Well-defined statistical, data analytic, or machine learning foundations
  - How to add substantive knowledge: With few exceptions, unclear
  - The literature: little guidance on when methods apply
  - Deriving such guidance: difficult or impossible

The Problem with Fully Automated Clustering

- The (Impossible) Goal: optimal, fully automated, application-independent cluster analysis
- No free lunch theorem: every possible clustering method performs equally well on average over all possible substantive applications
- Existing methods:
  - Many choices: model-based, subspace, spectral, grid-based, graph-based, fuzzy k-modes, affinity propagation, self-organizing maps,...
  - Well-defined statistical, data analytic, or machine learning foundations
  - How to add substantive knowledge: With few exceptions, unclear
  - The literature: little guidance on when methods apply
  - Deriving such guidance: difficult or impossible
- Deep problem: full automation requires more information

The Problem with Fully Automated Clustering

- The (Impossible) Goal: optimal, fully automated, application-independent cluster analysis
- No free lunch theorem: every possible clustering method performs equally well on average over all possible substantive applications
- Existing methods:
  - Many choices: model-based, subspace, spectral, grid-based, graph-based, fuzzy k-modes, affinity propagation, self-organizing maps,...
  - Well-defined statistical, data analytic, or machine learning foundations
  - How to add substantive knowledge: With few exceptions, unclear
  - The literature: little guidance on when methods apply
  - Deriving such guidance: difficult or impossible
- Deep problem: full automation requires more information
- No surprise: everyone's tried cluster analysis; very few are satisfied

Switch from Fully Automated to Computer Assisted

Switch from Fully Automated to Computer Assisted

- Fully Automated Clustering may succeed sometimes, but fails in general: too hard to understand when each model applies

Switch from Fully Automated to Computer Assisted

- Fully Automated Clustering may succeed sometimes, but fails in general: too hard to understand when each model applies
- An alternative: Computer-Assisted Clustering

Switch from Fully Automated to Computer Assisted

- Fully Automated Clustering may succeed sometimes, but fails in general: too hard to understand when each model applies
- An alternative: Computer-Assisted Clustering
  - Easy in theory: list all clusterings; choose the best

Switch from Fully Automated to Computer Assisted

- Fully Automated Clustering may succeed sometimes, but fails in general: too hard to understand when each model applies
- An alternative: Computer-Assisted Clustering
  - Easy in theory: list all clusterings; choose the best
  - Impossible in practice: Too hard for us mere humans!

Switch from Fully Automated to Computer Assisted

- Fully Automated Clustering may succeed sometimes, but fails in general: too hard to understand when each model applies
- An alternative: Computer-Assisted Clustering
  - Easy in theory: list all clusterings; choose the best
  - Impossible in practice: Too hard for us mere humans!
  - An organized list will make the search possible

Switch from Fully Automated to Computer Assisted

- Fully Automated Clustering may succeed sometimes, but fails in general: too hard to understand when each model applies
- An alternative: Computer-Assisted Clustering
  - Easy in theory: list all clusterings; choose the best
  - Impossible in practice: Too hard for us mere humans!
  - An organized list will make the search possible
  - Insight: Many clusterings are perceptually identical

Switch from Fully Automated to Computer Assisted

- Fully Automated Clustering may succeed sometimes, but fails in general: too hard to understand when each model applies
- An alternative: Computer-Assisted Clustering
  - Easy in theory: list all clusterings; choose the best
  - Impossible in practice: Too hard for us mere humans!
  - An organized list will make the search possible
  - Insight: Many clusterings are perceptually identical
  - E.g.,: consider two clusterings that differ only because one document (of 10,000) moves from category 5 to 6

Switch from Fully Automated to Computer Assisted

- Fully Automated Clustering may succeed sometimes, but fails in general: too hard to understand when each model applies
- An alternative: Computer-Assisted Clustering
  - Easy in theory: list all clusterings; choose the best
  - Impossible in practice: Too hard for us mere humans!
  - An organized list will make the search possible
  - Insight: Many clusterings are perceptually identical
  - E.g.,: consider two clusterings that differ only because one document (of 10,000) moves from category 5 to 6
- Question: How to organize clusterings so humans can understand?

⇝ We develop a (conceptual) geography of clusterings

A New Strategy

Make it easy to choose best clustering from millions of choices

A New Strategy

Make it easy to choose best clustering from millions of choices

1. Code text as numbers (in one *or more* of several ways)

A New Strategy

Make it easy to choose best clustering from millions of choices

1. Code text as numbers (in one *or more* of several ways)
2. Apply all clustering methods we can find to the data — each representing different (unstated) substantive assumptions (<15 mins)

A New Strategy

Make it easy to choose best clustering from millions of choices

1. Code text as numbers (in one *or more* of several ways)
2. Apply all clustering methods we can find to the data — each representing different (unstated) substantive assumptions (<15 mins)
3. (Too much for a person to understand, but organization will help)

A New Strategy

Make it easy to choose best clustering from millions of choices

1. Code text as numbers (in one *or more* of several ways)
2. Apply all clustering methods we can find to the data — each representing different (unstated) substantive assumptions (<15 mins)
3. (Too much for a person to understand, but organization will help)
4. Develop an application-independent distance metric between clusterings, a metric space of clusterings, and a 2-D projection

A New Strategy

Make it easy to choose best clustering from millions of choices

1. Code text as numbers (in one *or more* of several ways)
2. Apply all clustering methods we can find to the data — each representing different (unstated) substantive assumptions (<15 mins)
3. (Too much for a person to understand, but organization will help)
4. Develop an application-independent distance metric between clusterings, a metric space of clusterings, and a 2-D projection
5. "Local cluster ensemble" creates a new clustering at any point, based on weighted average of nearby clusterings

A New Strategy

Make it easy to choose best clustering from millions of choices

1. Code text as numbers (in one *or more* of several ways)
2. Apply all clustering methods we can find to the data — each representing different (unstated) substantive assumptions (<15 mins)
3. (Too much for a person to understand, but organization will help)
4. Develop an application-independent distance metric between clusterings, a metric space of clusterings, and a 2-D projection
5. "Local cluster ensemble" creates a new clustering at any point, based on weighted average of nearby clusterings
6. A new animated visualization to explore the space of clusterings (smoothly morphing from one into others)

A New Strategy

Make it easy to choose best clustering from millions of choices

1. Code text as numbers (in one *or more* of several ways)
2. Apply all clustering methods we can find to the data — each representing different (unstated) substantive assumptions (<15 mins)
3. (Too much for a person to understand, but organization will help)
4. Develop an application-independent distance metric between clusterings, a metric space of clusterings, and a 2-D projection
5. "Local cluster ensemble" creates a new clustering at any point, based on weighted average of nearby clusterings
6. A new animated visualization to explore the space of clusterings (smoothly morphing from one into others)
7. $\rightsquigarrow$ Millions of clusterings, easily comprehended

A New Strategy

Make it easy to choose best clustering from millions of choices

1. Code text as numbers (in one *or more* of several ways)
2. Apply all clustering methods we can find to the data — each representing different (unstated) substantive assumptions (<15 mins)
3. (Too much for a person to understand, but organization will help)
4. Develop an application-independent distance metric between clusterings, a metric space of clusterings, and a 2-D projection
5. "Local cluster ensemble" creates a new clustering at any point, based on weighted average of nearby clusterings
6. A new animated visualization to explore the space of clusterings (smoothly morphing from one into others)
7. $\rightsquigarrow$ Millions of clusterings, easily comprehended
8. (Or, our new strategy: represent the entire bell space directly; no need to examine document contents)

Many Thousands of Clusterings, Sorted & Organized

You choose one (or more), based on insight, discovery, useful information,. . .

Application-Independent Distance Metric: Axioms

Application-Independent Distance Metric: Axioms

- Metric based on 3 assumptions

Application-Independent Distance Metric: Axioms

- Metric based on 3 assumptions
  1. Distance between clusterings: a function of the pairwise document agreements (pairwise agreements $\Rightarrow$ triples, quadruples, etc.)

Application-Independent Distance Metric: Axioms

- Metric based on 3 assumptions
  1. Distance between clusterings: a function of the pairwise document agreements (pairwise agreements $\Rightarrow$ triples, quadruples, etc.)
  2. Invariance: Distance is invariant to the number of documents (for any fixed number of clusters)

Application-Independent Distance Metric: Axioms

- Metric based on 3 assumptions
  1. Distance between clusterings: a function of the pairwise document agreements (pairwise agreements $\Rightarrow$ triples, quadruples, etc.)
  2. Invariance: Distance is invariant to the number of documents (for any fixed number of clusters)
  3. Scale: the maximum distance is set to log(num clusters)

Application-Independent Distance Metric: Axioms

- Metric based on 3 assumptions
  1. Distance between clusterings: a function of the pairwise document agreements (pairwise agreements $\Rightarrow$ triples, quadruples, etc.)
  2. Invariance: Distance is invariant to the number of documents (for any fixed number of clusters)
  3. Scale: the maximum distance is set to log(num clusters)
- $\rightsquigarrow$ Only one measure satisfies all three (the "variation of information")

Application-Independent Distance Metric: Axioms

- Metric based on 3 assumptions
  1. Distance between clusterings: a function of the pairwise document agreements (pairwise agreements $\Rightarrow$ triples, quadruples, etc.)
  2. Invariance: Distance is invariant to the number of documents (for any fixed number of clusters)
  3. Scale: the maximum distance is set to log(num clusters)
- $\rightsquigarrow$ Only one measure satisfies all three (the "variation of information")
- (Meila, 2007, derives same metric using different axioms & lattice theory)

Evaluating Performance

Evaluating Performance

- Goals:

Evaluating Performance

- Goals:
  - Validate Claim: computer-assisted conceptualization outperforms human conceptualization

Evaluating Performance

- Goals:
  - Validate Claim: computer-assisted conceptualization outperforms human conceptualization
  - Demonstrate: new experimental designs for cluster evaluation

Evaluating Performance

- Goals:
  - Validate Claim: computer-assisted conceptualization outperforms human conceptualization
  - Demonstrate: new experimental designs for cluster evaluation
  - Inject human judgement: relying on insights from survey research

Evaluating Performance

- Goals:
  - Validate Claim: computer-assisted conceptualization outperforms human conceptualization
  - Demonstrate: new experimental designs for cluster evaluation
  - Inject human judgement: relying on insights from survey research
- We now present three evaluations

Evaluating Performance

- Goals:
  - Validate Claim: computer-assisted conceptualization outperforms human conceptualization

  - They can: compare two documents at a time
  - $\Longrightarrow$ Cluster quality evaluation: human judgement of document pairs
- Experimental Design to Assess Cluster Quality
  - automated visualization to choose one clustering
  - many pairs of documents

Evaluation 1: Cluster Quality

- What Are Humans Good For?
  - They can't: keep many documents & clusters in their head
  - They can: compare two documents at a time
  - $\Longrightarrow$ Cluster quality evaluation: human judgement of document pairs
- Experimental Design to Assess Cluster Quality
  - automated visualization to choose one clustering
  - many pairs of documents
  - for coders: (1) unrelated, (2) loosely related, (3) closely related

Evaluation 1: Cluster Quality

- What Are Humans Good For?
  - They can't: keep many documents & clusters in their head
  - They can: compare two documents at a time
  - $\Longrightarrow$ Cluster quality evaluation: human judgement of document pairs
- Experimental Design to Assess Cluster Quality
  - automated visualization to choose one clustering
  - many pairs of documents
  - for coders: (1) unrelated, (2) loosely related, (3) closely related
  - Quality = mean(within cluster) - mean(between clusters)

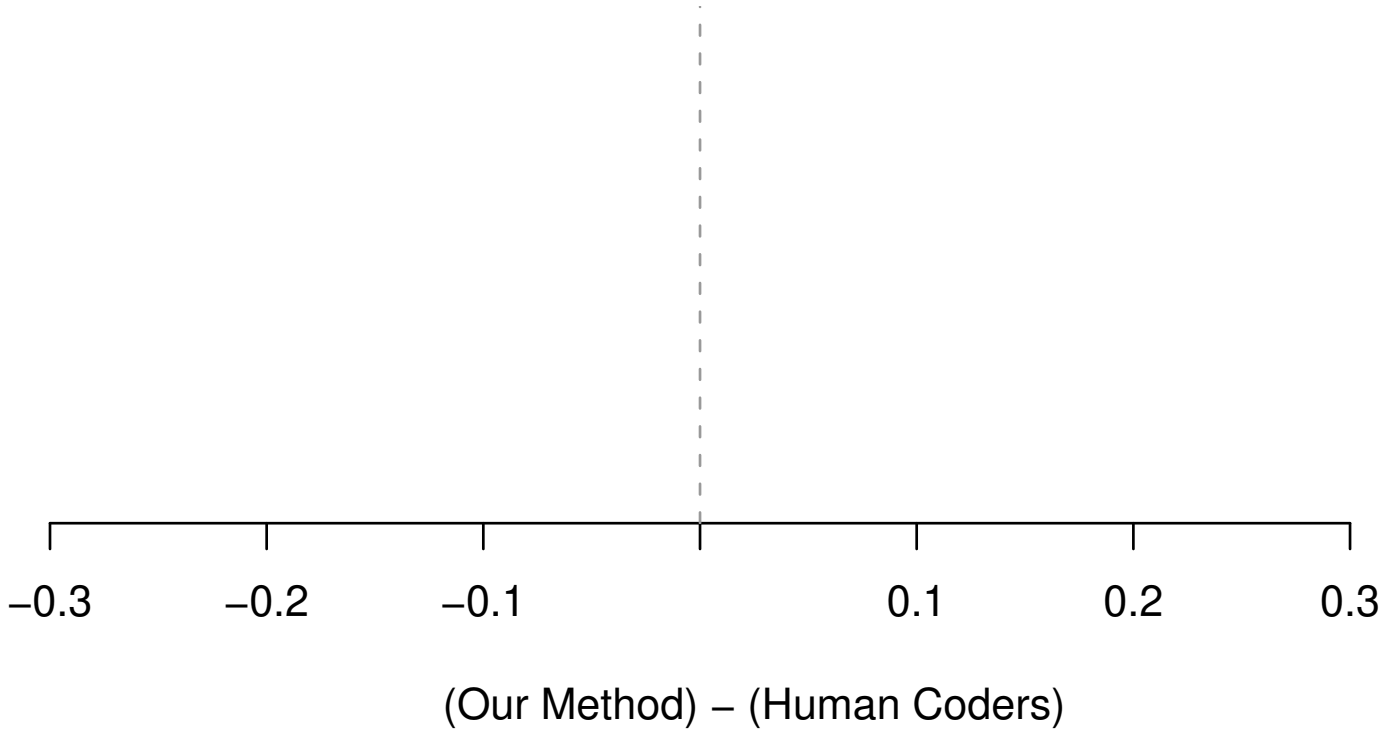
Evaluation 1: Cluster Quality

- What Are Humans Good For?
  - They can't: keep many documents & clusters in their head
  - They can: compare two documents at a time
  - $\Longrightarrow$ Cluster quality evaluation: human judgement of document pairs
- Experimental Design to Assess Cluster Quality
  - automated visualization to choose one clustering
  - many pairs of documents
  - for coders: (1) unrelated, (2) loosely related, (3) closely related
  - Quality = mean(within cluster) - mean(between clusters)
  - Bias results against ourselves by not letting evaluators choose clustering

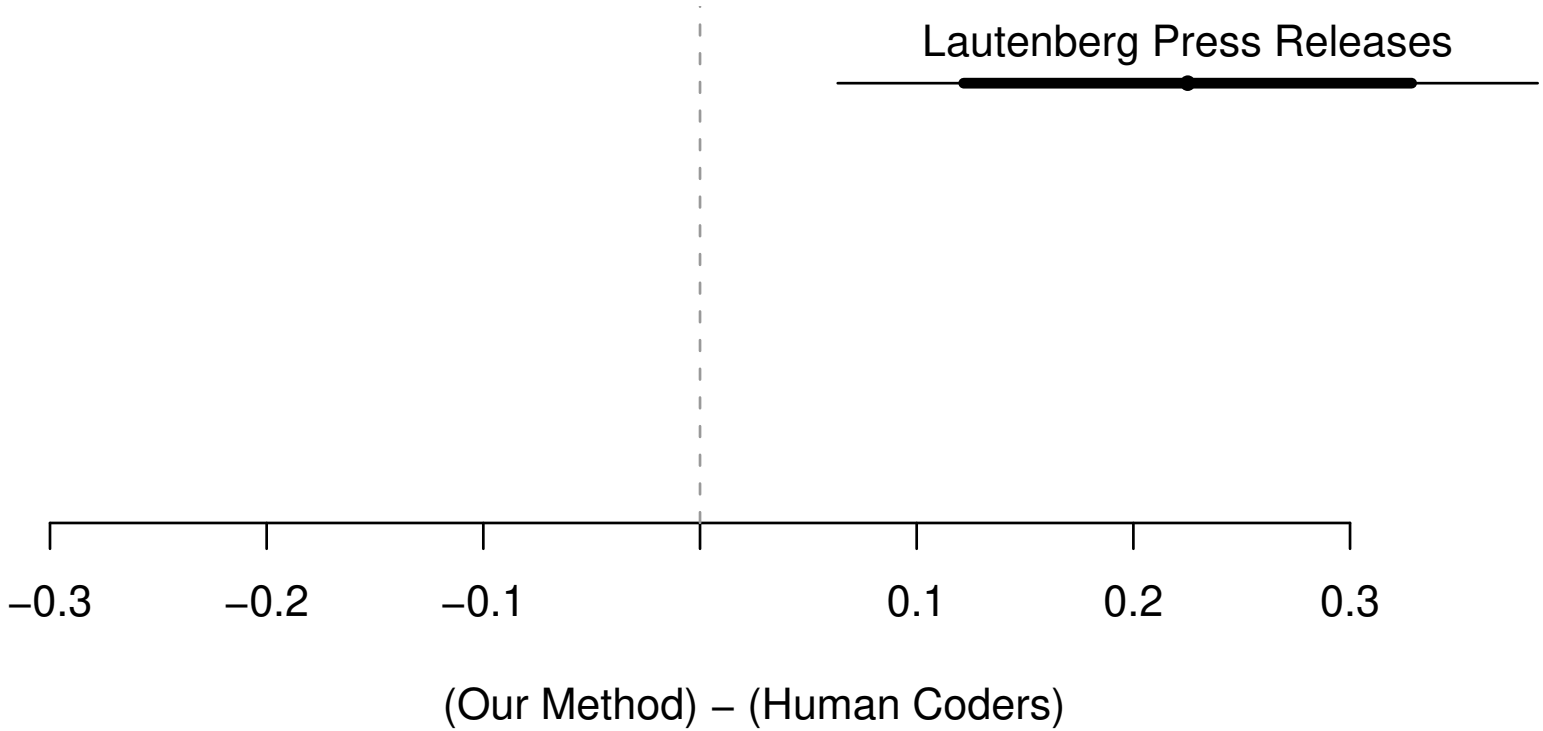
Evaluation 1: Cluster Quality

- What Are Humans Good For?
  - They can't: keep many documents & clusters in their head
  - They can: compare two documents at a time
  - $\Longrightarrow$ Cluster quality evaluation: human judgement of document pairs
- Experimental Design to Assess Cluster Quality
  - automated visualization to choose one clustering
  - many pairs of documents
  - for coders: (1) unrelated, (2) loosely related, (3) closely related
  - Quality = mean(within cluster) - mean(between clusters)
  - Bias results against ourselves by not letting evaluators choose clustering

Evaluation 1: Cluster Quality

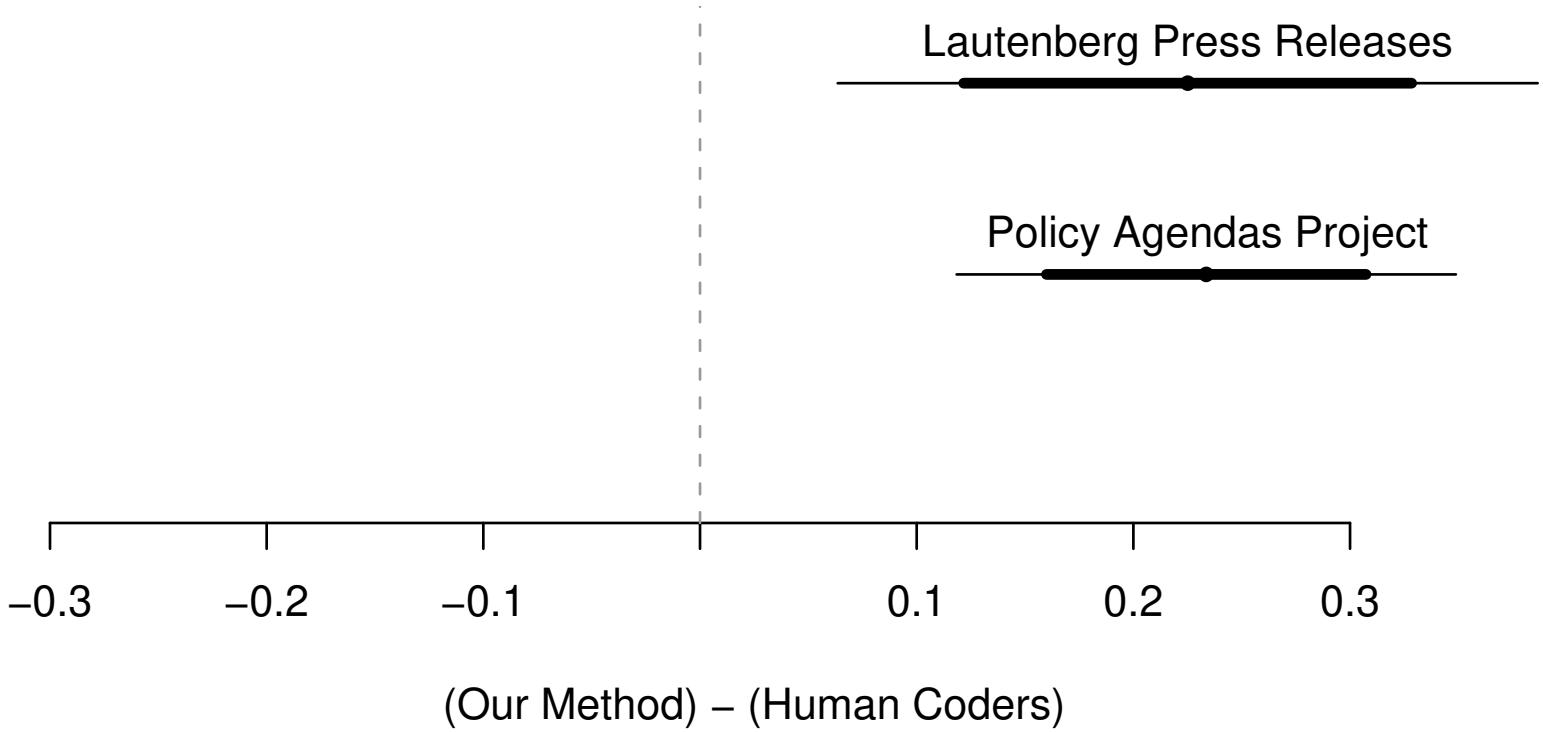


Evaluation 1: Cluster Quality



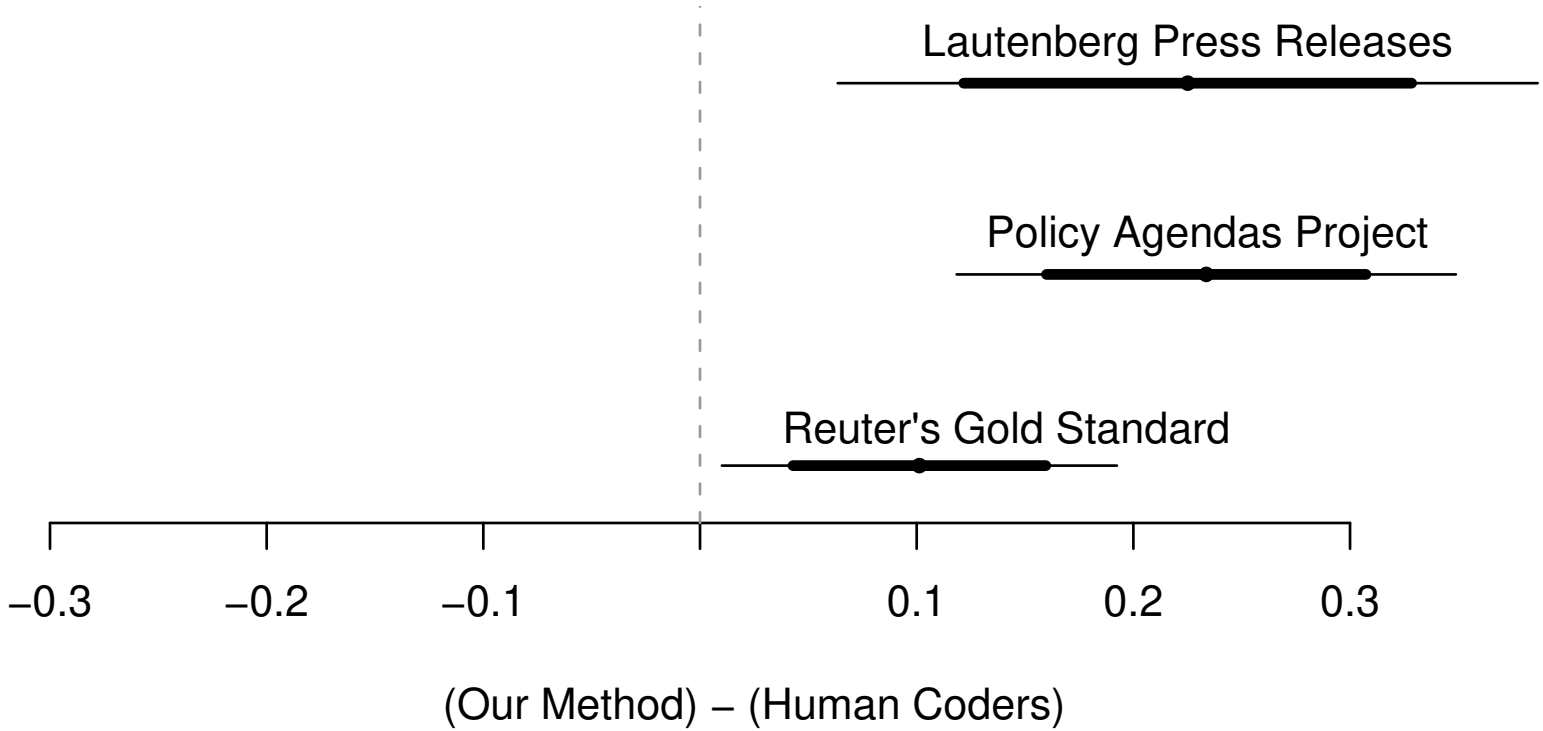
Lautenberg: 200 Senate Press Releases (appropriations, economy, education, tax, veterans, . . .)

Evaluation 1: Cluster Quality



Policy Agendas: 213 quasi-sentences from Bush's State of the Union (agriculture, banking & commerce, civil rights/liberties, defense, . . .)

Evaluation 1: Cluster Quality



Reuter's: financial news (trade, earnings, copper, gold, coffee, . . .); "gold standard" for supervised learning studies

Evaluation 2: More Informative Discoveries

Evaluation 2: More Informative Discoveries

- Found 2 scholars analyzing lots of textual data for their work

Evaluation 2: More Informative Discoveries

- Found 2 scholars analyzing lots of textual data for their work
- Created 6 clusterings:

Evaluation 2: More Informative Discoveries

- Found 2 scholars analyzing lots of textual data for their work
- Created 6 clusterings:
  - 2 clusterings selected with our method (biased against us)

Evaluation 2: More Informative Discoveries

- Found 2 scholars analyzing lots of textual data for their work
- Created 6 clusterings:
  - 2 clusterings selected with our method (biased against us)
  - 2 clusterings from each of 2 other methods (varying tuning parameters)

Evaluation 2: More Informative Discoveries

- Found 2 scholars analyzing lots of textual data for their work
- Created 6 clusterings:
  - 2 clusterings selected with our method (biased against us)
  - 2 clusterings from each of 2 other methods (varying tuning parameters)
- Created info packet on each clustering (for each cluster: exemplar document, automated content summary)

Evaluation 2: More Informative Discoveries

- Found 2 scholars analyzing lots of textual data for their work
- Created 6 clusterings:
  - 2 clusterings selected with our method (biased against us)
  - 2 clusterings from each of 2 other methods (varying tuning parameters)
- Created info packet on each clustering (for each cluster: exemplar document, automated content summary)
- Asked for $\binom{6}{2}=15$ pairwise comparisons

Evaluation 2: More Informative Discoveries

- Found 2 scholars analyzing lots of textual data for their work
- Created 6 clusterings:
  - 2 clusterings selected with our method (biased against us)
  - 2 clusterings from each of 2 other methods (varying tuning parameters)
- Created info packet on each clustering (for each cluster: exemplar document, automated content summary)
- Asked for $\binom{6}{2}$=15 pairwise comparisons
- User chooses $\Rightarrow$ only care about the one clustering that wins

Evaluation 2: More Informative Discoveries

- Found 2 scholars analyzing lots of textual data for their work
- Created 6 clusterings:
  - 2 clusterings selected with our method (biased against us)
  - 2 clusterings from each of 2 other methods (varying tuning parameters)
- Created info packet on each clustering (for each cluster: exemplar document, automated content summary)
- Asked for $\binom{6}{2}=15$ pairwise comparisons
- User chooses $\Rightarrow$ only care about the one clustering that wins
- Both cases a Condorcet winner:

Evaluation 2: More Informative Discoveries

- Found 2 scholars analyzing lots of textual data for their work
